

# Piksel Enterprise TV

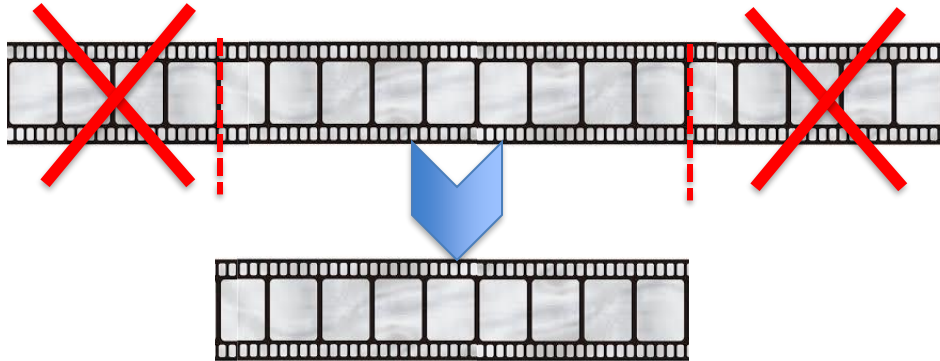

New console release 5.6.5.0

## New features

Upgrade scheduled  
for Tuesday 10th  
September 2019,  
from noon to 2 pm (CET)

# Video Cut

This new feature allows the user to select a part of a video in order to broadcast only the desired sequence.

Just define start point and/or the end point.

No need using video editing software.

But the video is fully uploaded in the console, and fully downloaded by the players.

Properties

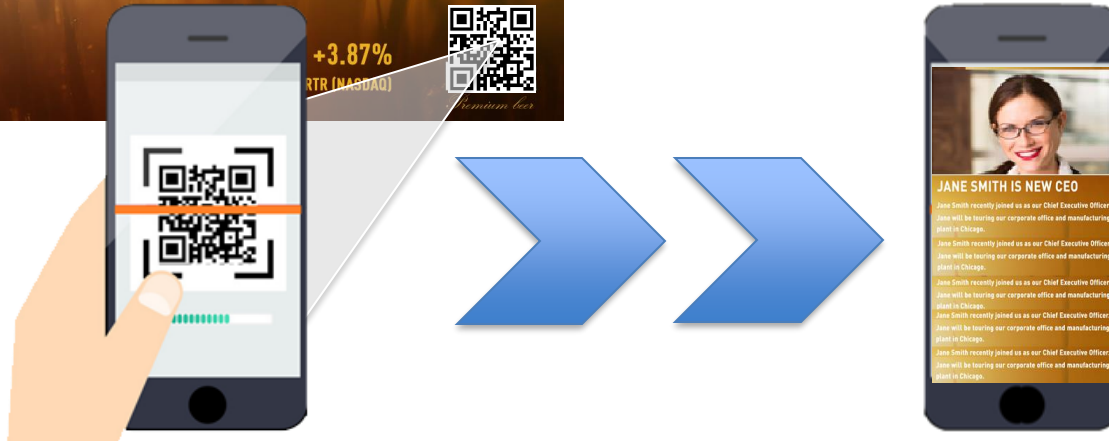

# QR code

With the console, the user can easily create a QR code, just editing the URL.

Integrated in a media as an image, it gives direct access to a URL to have more details about the information broadcasted

# Weather conditions

This new function allows to set a specific operating condition to a media, not only according to the date, the week day, the time, but also depending on weather conditions and temperatures.

# Some of the other improvements

## New Language

The console is now available in **German**

## External data integration

The console supports now CSV files,

## Broadcast of Webpages

Possibility to alternatively use Chrome on the player to broadcast webpages

Requires version 11.4 for devices

## PDF improvement

Previously, all pages of a PDF were transformed into single images and became single media. Now a PDF is a single media in the library.
